Summary

Product designer with 5 years of experience in mobile apps, SaaS, dashboards and websites for B2B and B2C. I own the full design cycle: client brief, discovery and UX research, prototyping and usability testing, design systems, developer handoff and post-launch iterations. I use AI daily (Claude, Gemini, Figma AI agents) to speed up research and handoff and to build live coded prototypes, not only Figma mockups. Key results: −25% bounce rate and −40% missed orders in a restaurant SaaS, −90% incomplete orders in a B2B procurement tool.

Experience

UX/UI Designer · PAIR Design Studio (pairmax.ru) · Jan 2026 – Sep 2026

Led client projects end to end, from the first brief to release and post-launch iterations, up to 4 projects at a time.

- Ran client briefings and discovery: business goals, constraints, audience, success metrics, competitor and app review analysis, customer interviews, JTBD, CJM, funnel analysis.
- Compared 2–3 concepts by impact on metrics, usability and development cost, and defended the chosen one with the client.
- Built information architecture, user flows, wireframes and interactive prototypes, and ran usability tests.
- Designed SCP LAB, a training app for professional athletes, from scratch: 68 screens and a Figma design system (88 components, 47 styles, 59 variables).
- Cut research time with Claude to about 5 minutes instead of up to 24 hours of manual search.
- Cut handoff prep to about 1 hour instead of 16 with Claude and the Figma AI agent (layer naming, styles, responsive layouts, UI kit, contrast and missing-screen checks).
- Caught contrast issues before video production and development by testing the UI on Gemini-generated low-light frames.

UX/UI Designer · FoodBot · Feb 2025 – Jan 2026

SaaS for restaurant delivery bots in Telegram (B2B, HoReCa). Designed three products from scratch: a landing page, a web admin panel (174 screens) and a Telegram Mini App (150+ screens).

- Turned a database-like admin panel into a clear builder: bounce rate −25%.
- Broke bot setup into a step-by-step flow with cards and hints: setup time −30%.
- Added in-context hints: support tickets −20%.
- Launched a Mini App with instant notifications for orders and stop lists: missed orders −40%.
- Built and maintained the design system with all screen states: development 20% faster.
- Used LLMs to cluster reviews and competitor flows, and wrote a script for attention heatmaps to check visual hierarchy.

UX/UI Designer · Cable Distributor (B2B) · Nov 2024 – Feb 2025

Internal procurement system for managers handling about 50 orders a day by hand.

- Interviewed managers and analysed support tickets; found three core problems: no order registry with statuses, no visibility of which suppliers got a request, no control of incomplete lists.
- Mapped the procurement CJM and designed every branch, including edge cases.
- Built a UI kit (74 icons, 36 button variants, tables with 12 row states): new screens 35% faster to build.
- Tested an AI-built interactive prototype with managers and iterated.
- Order placement 35% faster; incomplete orders −90%.

UX/UI Designer · Marketplace (NDA) · Feb 2024 – Nov 2024

Seller dashboard.

- Interviewed sellers and mapped their jobs; put the top-5 products widget first on the home screen.
- Designed information architecture, flows and prototypes and validated them with sellers before visual design.
- Designed empty and error states, built the UI kit and design system, ran design reviews.

UX/UI Designer · Mobile App Studio (clients from China, remote) · May 2023 – Feb 2024

- Designed 15+ iOS apps for the App Store, each with its own visual style and motion.
- 12 of 15 apps passed App Store review on the first try.
- Delivered animations as Lottie JSON straight to development; annotated mockups cut development time by about 20%.

UX/UI Designer · Freelance · Nov 2021 – May 2023

- Designed landing pages, corporate and multi-page websites and online stores end to end.
- Owned market research, user flows, responsive design, UI kits and handoff.

Skills

Design: Product Design, UX/UI Design, Mobile App Design (iOS), Web Design, Responsive Design, Interaction Design, Motion Design (Lottie), Information Architecture, User Flows, Wireframing, Prototyping, Design Systems, UI Kits.

Research and product: UX Research, Customer Development, JTBD, CJM, Usability Testing, A/B Testing, Funnel Analysis, Product Metrics, Design Reviews, Developer Handoff.

Tools: Figma (Auto Layout, Variables, Components, Figma AI Agent), Framer, Adobe Photoshop, Claude, ChatGPT, Gemini.

Industries: EdTech, MedTech and Healthcare, Services, Veterinary Clinics, Real Estate and Property Development, Alcoholic Beverages, Events, GameDev, iGaming and Betting, E-commerce and Retail, HoReCa and Food Delivery, Sports and Fitness, Beauty and Cosmetics, Coworking, Manufacturing and B2B Procurement, Engineering.

Product types: SaaS platforms, analytics dashboards, B2B and B2C customer portals, mobile apps, Telegram Mini Apps, wellness apps (sleep tracking), access control apps, internal tools, online booking, loyalty programs, promo campaigns and brand collaborations, landing pages, corporate and brand websites.

Education

National Research Tomsk Polytechnic University, Russia · 2021 · UX/UI Design

Languages

Russian: native · English: A1 (comfortable with written communication and calls using AI translation tools)
