Summary

Product designer with 5 years of end-to-end experience across B2B SaaS, admin panels, dashboards, mobile apps and Telegram Mini Apps. I start with research and metrics, test on prototypes, and ship design systems developers enjoy using. Shipped 15+ App Store apps and 300+ screens for a restaurant SaaS, where my redesign cut bounce rate by 25% and missed orders by 40%. AI-native workflow: Claude, Gemini and Figma agents cut design handoff prep from ~16 hours to ~1 hour.

Experience

UX/UI Designer — PAIR Design Studio (pairmax.ru)

Jun 2025 – Sep 2026 · Remote

Led up to 4 client projects at once, from discovery to post-launch iterations, across EdTech, HealthTech, real estate, iGaming, e-commerce and fitness.

- Designed **SCP LAB**, a mobile app for professional athletes, from scratch: 68 screens and a design system of 88 components, 47 styles and 59 variables, ready for development.
- Cut handoff prep from ~16 hours to ~1 hour per project with Claude and a Figma AI agent (layer naming, styles, responsive states, contrast and missing-screen checks).
- Reduced market and competitor research from ~24 hours of manual work to minutes using Claude.
- Ran discovery end to end: stakeholder briefs, app store review analysis, customer interviews, JTBD, CJM and funnel analysis.
- Presented 2–3 concepts per problem, compared on metric impact, usability and build cost; validated with usability tests and coded live prototypes.
- Caught contrast issues before video production and development by testing UI on AI-generated frames with difficult lighting.

UX/UI Designer — FoodBot

Feb 2025 – Jun 2025 · B2B SaaS for restaurant delivery bots (HoReCa)

Designed three products from scratch: a landing page, a web admin panel (174 screens) and a Telegram Mini App (150+ screens).

- Turned a database-like admin panel into a clear bot builder: **bounce rate −25%**.
- Broke bot setup (including BotFather) into a guided step-by-step flow: **setup time −30%**.
- Added in-context hints across the interface: **support tickets −20%**.
- Launched a Telegram Mini App with instant notifications so owners manage orders and stop-lists from their phone: **missed orders −40%**.
- Built and maintained the design system with full screen states: **development 20% faster**.
- Used LLMs to cluster reviews, docs and competitor flows; wrote a script generating attention heatmaps to check visual hierarchy.

UX/UI Designer — KPS, B2B cable industry portal (k-ps.ru)

Feb 2024 – Feb 2025

- Redesigned the cable procurement system for sales managers after interviews and support-ticket analysis: **order placement 35% faster**, **incomplete orders −90%**.
- Mapped the full procurement CJM and user flows, including edge cases such as long lists and partially sent supplier requests.
- Built a UI kit (74 icons, 36 button variants, tables with 12 row states): **new screens assembled 35% faster**.
- Designed a stock and price-list recognition tool with registries, error states and bulk-change confirmations: **inventory management 40% faster**.
- Tested AI-built prototypes with managers before handoff; also produced display banners for the portal.

UX/UI Designer — E-commerce Marketplace (NDA)

Apr 2023 – Feb 2024

End-to-end design of the seller dashboard.

- Interviewed sellers, built a jobs map and designed the information architecture and navigation.
- Designed the core flows: step-by-step product listing with deep category trees, catalog with filters, orders with statuses, and support tickets.

- Designed sales analytics with period-over-period comparison, FBS logistics, commissions and ad campaign setup.
- Validated flows with sellers on clickable and AI-built browser prototypes before visual design; built the UI kit and ran design reviews.

UX/UI Designer — Mobile App Studio (China, remote)

May 2022 – Apr 2023

- Designed and shipped **15+ iOS apps** end to end, each with its own visual concept and mechanics (e.g. Haven VPN shows connection as a plug going into a socket).
- **12 of 15 apps passed App Store review on the first try**, the rest on the second, following Apple HIG and review guidelines.
- Designed and A/B tested paywalls, onboarding and subscriber vs free states.
- Delivered Lottie animations, app icons and App Store screenshots for iPhone and iPad.
- Annotated specs for an international dev team: **development ~20% faster** with fewer questions.

UX/UI Designer — ALMAWEB Design Studio (almaweb.kz)

Nov 2021 – May 2022 · Kazakhstan

- Designed 6 corporate websites and landing pages for food manufacturing, LED displays, water treatment, engineering and EdTech clients, each with its own visual style and UI kit.
- Designed product catalogs, lead forms with full error states, and interactive animated prototypes.
- Replaced photo shoots with AI-generated imagery adapted to each brand.

Skills

- **Research:** customer interviews, JTBD, CJM, usability testing, A/B testing, competitor and review analysis, funnel and product metrics
- **Design:** information architecture, user flows, wireframes, interactive prototypes, responsive web, iOS (Apple HIG), Telegram Mini Apps, motion (Lottie)
- **Design systems:** UI kits, Figma Auto Layout, Variables and components, handoff specs, design QA
- **Tools:** Figma (incl. Figma AI agent), Framer, Photoshop, Claude, Gemini, ChatGPT, code-based prototypes
- **Domains:** B2B SaaS, admin panels and dashboards, internal tools, marketplaces, e-commerce, HoReCa, HealthTech, EdTech, iGaming, fitness
